Fruits and Plant's Needs

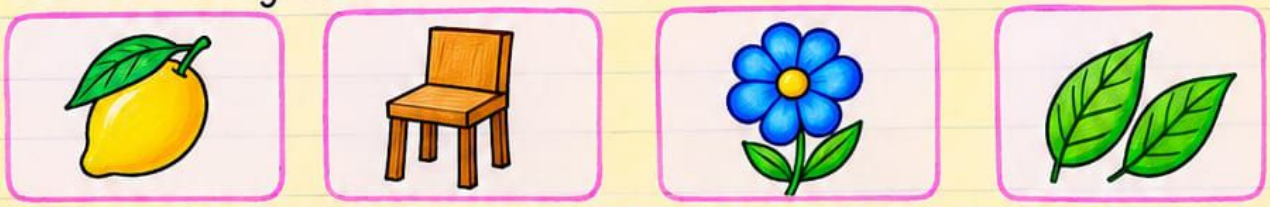

Fruits

- The fruit is the fleshy part of the plant, enclosing the seed or seeds.
- Some of the fruits that we eat are orange, mango, apple, grapes, etc.

Try it yourself

Given below are things that we get from plants. Circle the ones that you need on a daily basis.

Plant's Needs

- Plants need food for growth. Plants prepare their own food.
- Plants need the following things to grow.
- **Sunlight** : Plant's leaves absorb sunlight as required by the plant to make their food.
- **Water** : Sufficient water is required for the healthy growth of plants.
- **Air** : Plants take in carbon dioxide through leaves and give out oxygen in the process of making their food. For this they require air.
- **Rich soil** : Plants get minerals that they need from the soil where they are planted. These minerals are taken in by the roots.
- **Space** : Plants need sufficient space to grow and expand their roots to bind them to the ground.

Must Know

- Unlike other plants, Cactus can grow without water because of its ability to store water for a longer time.
